DIGITAL ORCHESTRATION

Accelerating the new product introduction process

MenaBev aims to streamline and shorten the end-to-end system process for launching new products, thereby eliminating manual master data errors and accelerating master data creation. The optimized process will be more robust and efficient, significantly reducing the overall effort required from business users across multiple departments in creating and maintaining master data.

INTRODUCTION & REQUIREMENTS

Business Context

MenaBev intends to implement an enterprise-grade AI application to streamline and automate end-to-end new product launch activities for business users. The solution will provide a guided request initiation process, offering predefined options and data-entry fields for new product proposals, thereby ensuring completeness and consistency of submitted information. Upon submission, an integrated workflow will automatically route the request to Finance and Manufacturing stakeholders, enabling them to review, amend, and enrich department-specific data prior to final approval of the product launch.

AI Recommendations

The application will leverage advanced AI capabilities to generate recommendations based on curated business datasets and operational data extracted from SAP S/4HANA. These AI-driven insights will support more informed decision-making, improve data quality, and accelerate approval cycles for new product introductions.

BUSINESS PROCESS FLOW

1

New Product
Launch Request
Raised by the
user

- Modifiable Fields
- Retrieve Real-time SAP Data
- AI Recommendations

2

Based on the
product
categories, the
workflow will be
triggered

- Configurable Stakeholders
- Email Notifications
- Workflow monitoring

3

Finance,
Procurement &
Manufacturing
stakeholders will
review the
request, amend
information &
approve

- AI Recommendations
- Configurable business rules
- Real-time SAP data retrieval

4

Once approved,
material master,
BOM and master
recipe will be
created in SAP

- Real-time SAP integration
- Tracking & Reporting

SCOPE ITEMS

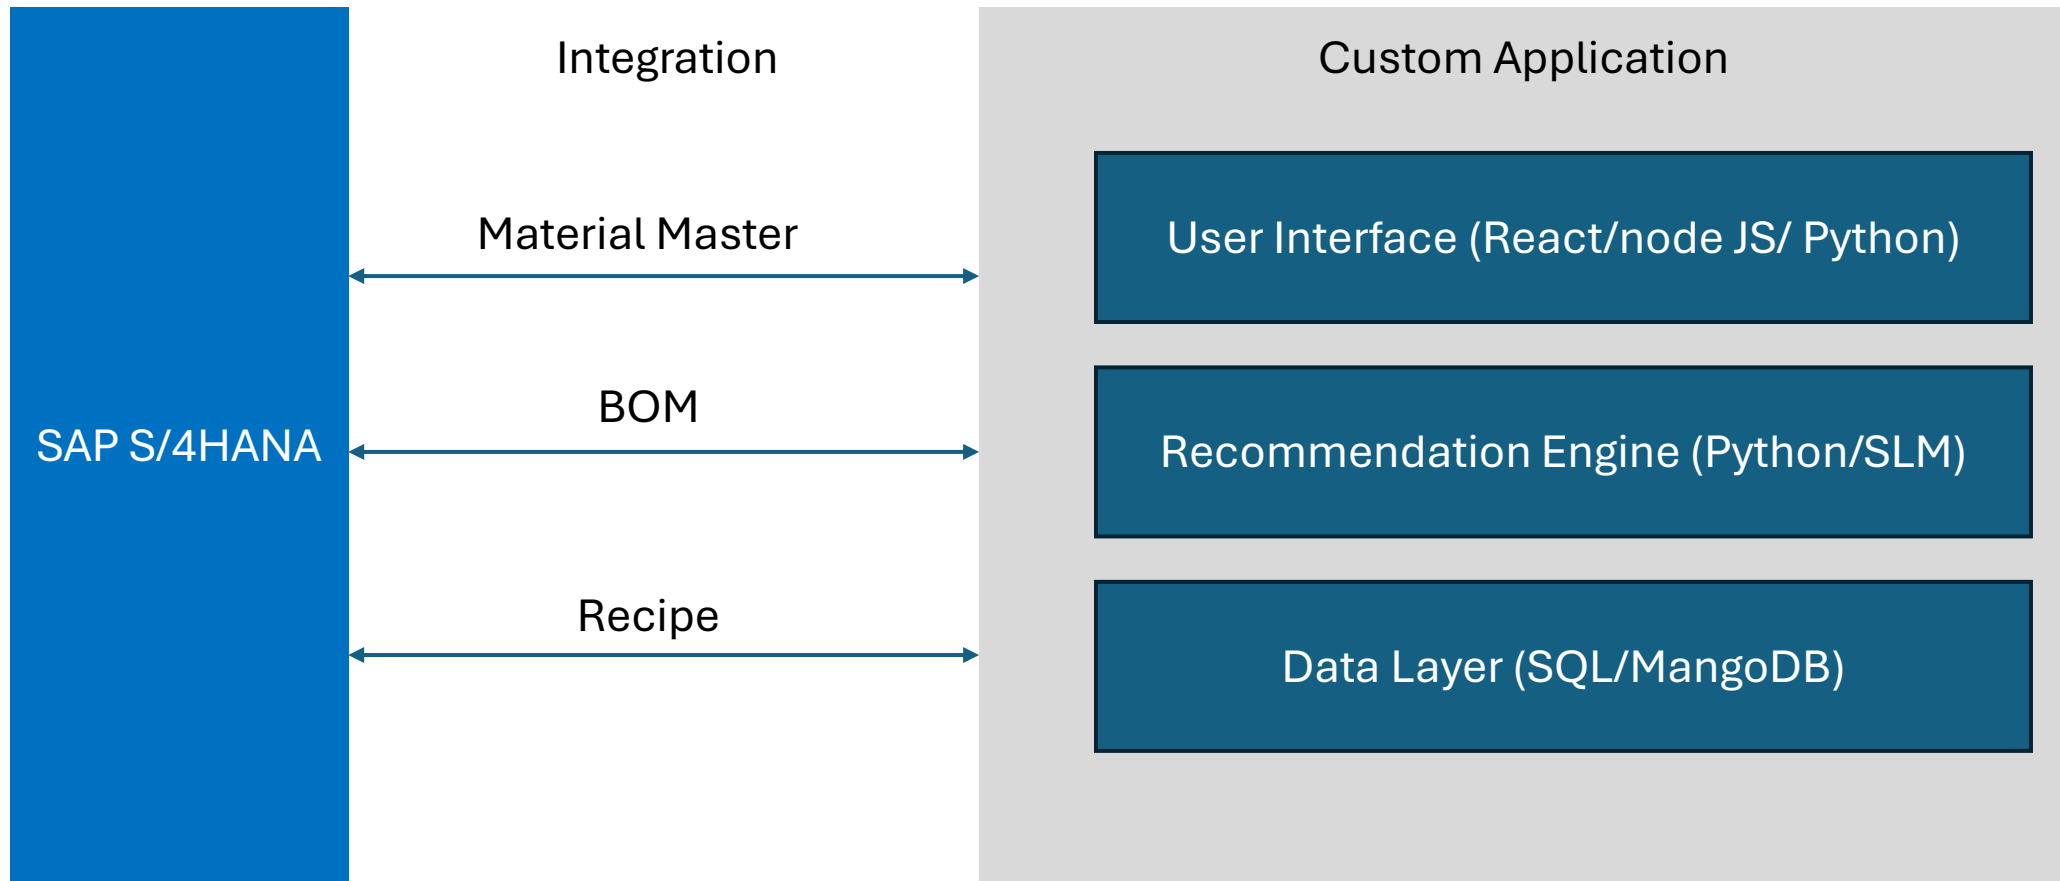

Functional Scope

- New Product Launch / Creation
- Existing Product Amendment / Update- update existing materials
- Mass Product Creation (to be analyzed with Business users) – Bulk creation, Bulk upload (excel and AI prompts)
- AI recommendation of reference materials, BOM & Recipe – BOM & Recipe creation with AI
- Two Steps workflow – Manufacturing approval & Finance approval
- Auto creating request for ZATCA and Brand generation upload feature.
- Dashboard including Sales data to analyze how the new product is performing

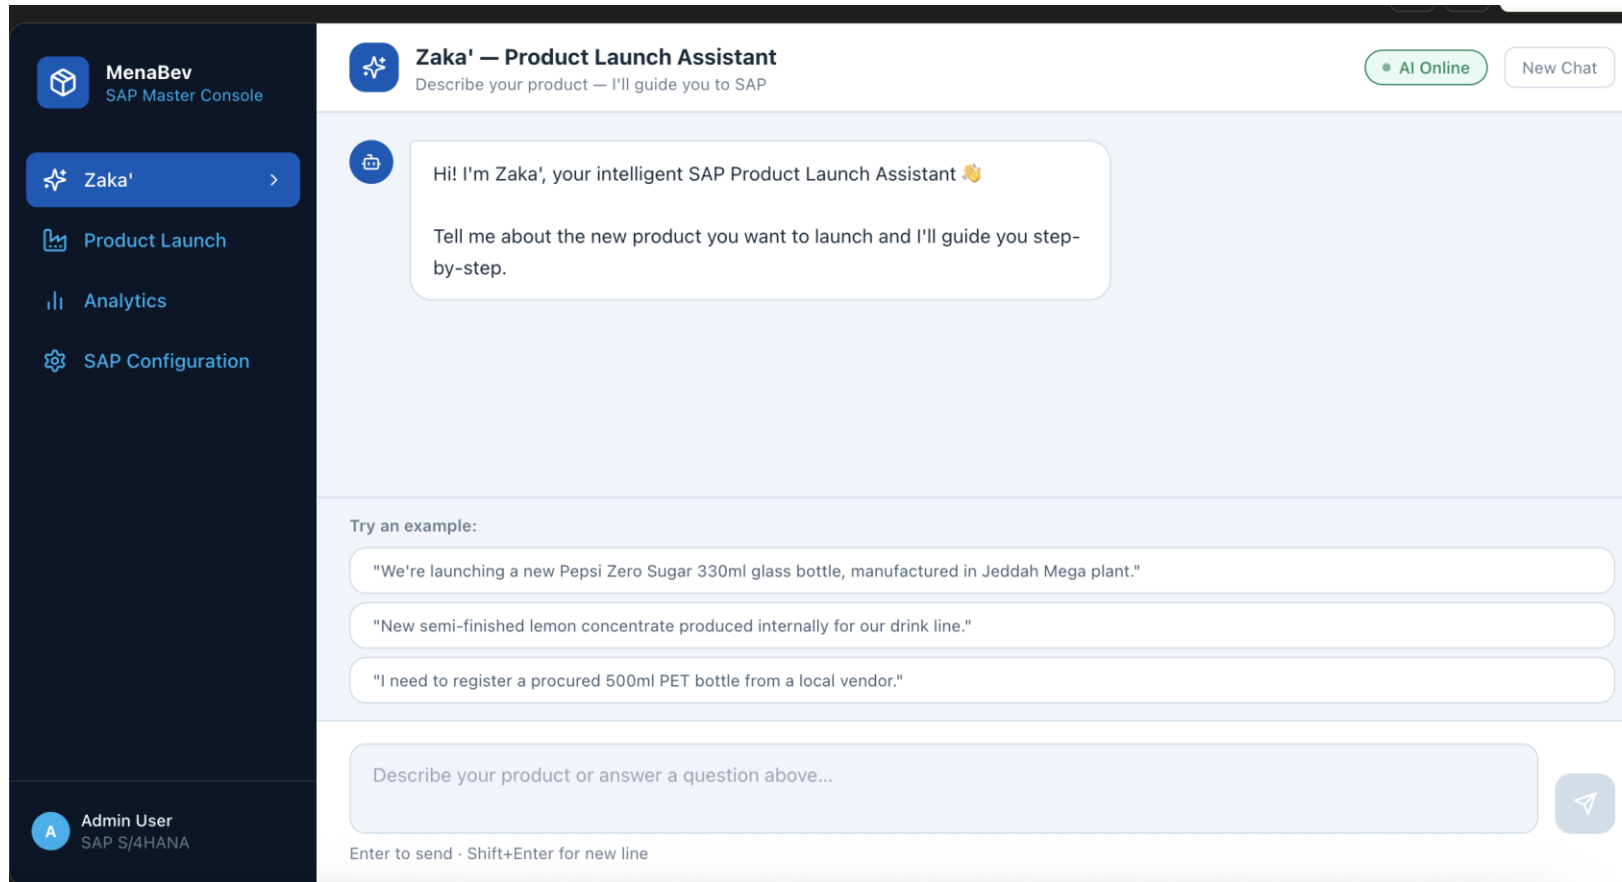

Technical Scope

- Implement LLM/AI model in Azure Infrastructure
- Integrate with SAP using APIs

AI Recommendation

112040-1-0101-00
CSD Pepsi NRB 250ml
Plant: P001 Val. Class: 7900

Reason: Direct brand match - both are Pepsi products. This reference material shares the same brand name and product category (CSD - Carbonated Soft Drink), making it the most suitable template for creating a new Pepsi product.

Confidence: HIGH
